1. Installation

To install the mOver Wordpress plugin you need:

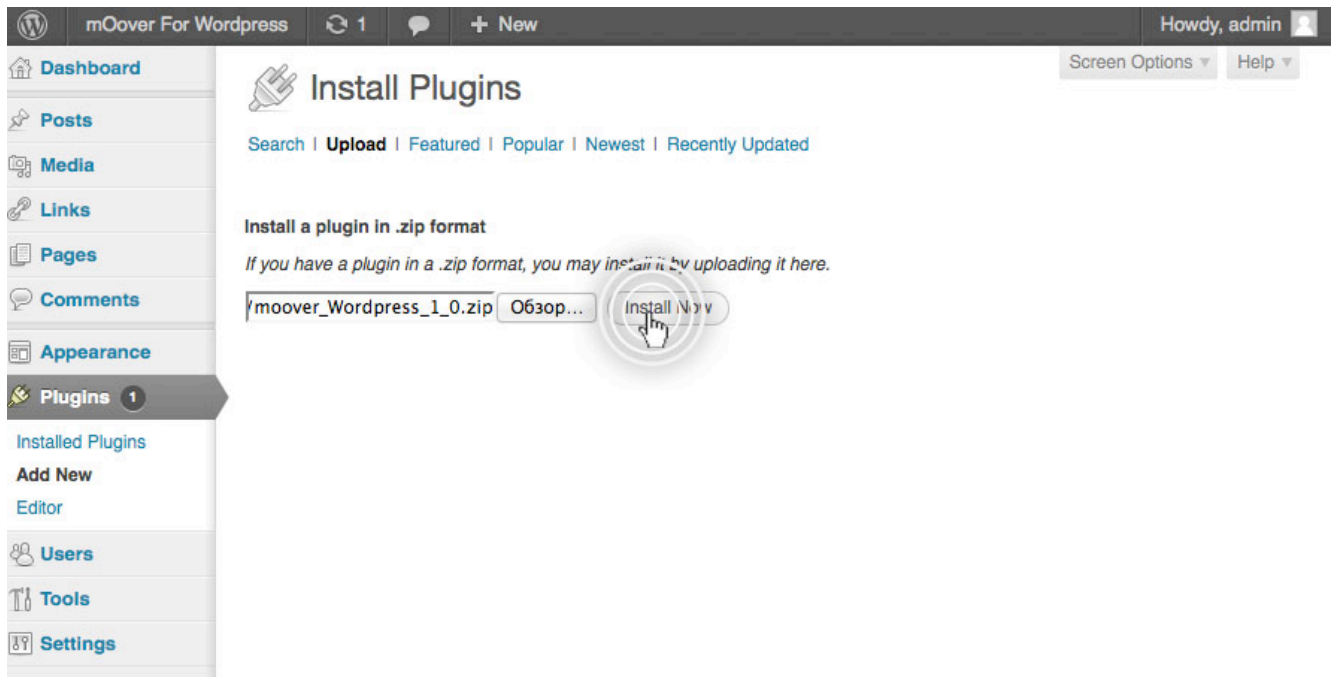

- 1) to login to your Wordpress admin area, for example on <http://www.mywebsite.com/wp-admin/>.
- 2) then you need to go to the "Plugins" page and click on "Add New" link.

- 3) Click the "Upload" link

- 4) Click on the "Browse" button, in the opened window choose the "mOover_Worpdress_1_x.zip" file from the downloaded archive
- 5) After that - "Install Now" button

The plugin will be uploaded and installed. Now you need to activate it by clicking on the "Activate" button on the Plugins page:

After the plugin activated you will see new menu section "mOover" with two submenus

The screenshot shows the WordPress admin interface. On the left sidebar, the 'Plugins' menu is highlighted with a '1' badge. Below it, the 'mOover' plugin is listed with a submenu. The submenu contains two items: 'mOover' and 'Add New'. The main content area shows the 'Plugins' page with a yellow notification bar at the top stating 'Plugin activated.' Below this, there are filters for 'All (3)', 'Active (1)', 'Inactive (2)', and 'Update Available (1)'. A search bar for 'Search Installed Plugins' is also present. The table of installed plugins lists 'Akismet' and 'Hello Dolly'. A yellow notification bar in the middle of the table states: 'There is a new version of Akismet available. View version 2.5.5 details or update automatically.' The 'mOover' plugin is listed below 'Hello Dolly' with its version 1.6 and author 'Matt Mullenweg'.

2. mOover Admin Pages

2.1. mOover Management/Dashboard Page

mOover Dashboard page is the home page of mOover. To get this page you need to click on the "mOover" submenu.

If you have not created any mOover the page will look like this one:

iDangero.us mOover

Seems to be you have not created any mOover. Click the button bellow to create your first mOover and get ready for fun:

Add New mOover

mOover Dashboard

iDangero.us on Twitter

jQuery mOover - Ultra Slick and Fancy CSS3 Slider. Updated to version 1.3 with lot of features. More information at: <http://t.co/vjOmMNN6>
on Wed Mar 28 17:43:56

Plugin Settings Close

Remove mOover database on plugin delete: Remove

Set to "Do not remove" if you are going to remove mOover before update to the new version

Permissions: Super Admin

Switch to "Administrator" if you are using Multiple Sites and want to allow for the sites administrators to mananage sliders.

Save Changes

On this page you can see message that you need to create your first Slider and two additional content boxes with useful information:

iDangero.us on Twitter

Content box with latest tweets from iDangero.us. Here you will find information about mOover news, updates, bugs, etc.

Plugin Settings Tab

Plugin Settings Close

Remove mOover database on plugin delete: Remove

Set to "Do not remove" if you are going to remove mOover before update to the new version

Permissions: Super Admin

Switch to "Administrator" if you are using Multiple Sites and want to allow for the sites administrators to mananage sliders.

Save Changes

- Remove mOover database on plugin delete

If you want to re-install mOover or to update it to new version you can switch this option to "Do not remove" and after you delete and then install mOover all created sliders will be in safe.

- Permission

If you are using Multi Site and want to allow for the sites administrators to manage Sliders you need to switch permission from Super Admin to Administrator

Slides Table

If you already create at least one mOover, you will see the following table on your dashboard:

<input type="checkbox"/>	Title	Shortcode	Template Tag	Version	Created / Updated	Edit	Remove
<input type="checkbox"/>	My mOover Pusher	[moover id="12"]	<?php moover(12) ?>	5	2012-04-04 11:49:56	Edit	X
<input type="checkbox"/>	My mOover Copy	[moover id="11"]	<?php moover(11) ?>	2	2012-04-03 18:34:46	Edit	X
<input type="checkbox"/>	My mOover	[moover id="10"]	<?php moover(10) ?>	22	2012-04-04 10:42:51	Edit	X
<input type="checkbox"/>	Bulk Actions ▼		Apply				

As you can see it is a table with short information about created Sliders. Table has the following columns:

- **Bulk Actions.** Here you can choose multiple Sliders that you can simply copy (duplicate) or remove.
- **Title.** Title of the created Slider.
- **Shortcode.** If you want to integrate the slider with a shortcode you need to copy (or remember) required shortcode and insert it in the text editor's window.
- **Template Tag.** Actually it is a name of PHP function that you need to insert in the template's file (for example in the header.php file), where you want to insert required Slider.
- **Version.** Version of the created/updated Slider. It is used to refresh caching of the generated files and scripts.
- **Created/Updated.** Here is the last modified date.
- **Edit.** Click this button to get the page where you can edit created slider.
- **Remove.** If you want to remove some of created sliders you need to click on this button.

2.2. Add New/Edit Page

If you click on the "Add New" mOover's submenu you will get to the page which is intended for the Slider creation. On this page you can see a large form with a lot of parameters and options:

Add New mOover

Title

Title (required) :

My mOover

Dimension

Dimension (required) :

If you want to make slider responsive, set width field in percents, e.g. 100%

800

x

300

in px

Slides

Use Drag & Drop for re-ordering.

Add

Settings

Move Background Image :

(If move, this background image will be moving during the selected text edit)

Do not move

You can find more information about this page and how to create new mOover in the next chapter.

2. Creating New mOover

So to create new mOover you need to click on the "Add New" mOover's submenu link.

2.1. Title and Dimension

First of all you need to specify Slider's title and its dimension:

Add New mOover

Title

Title (required) :

Dimension

Dimension (required) :

800

x

300

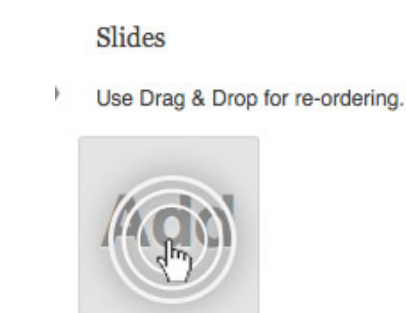

in px

If you want to make slider responsive, set width field in percents, e.g. 100%

If you need to make the Slider responsive you can fill width field with a value with percents, for example "100%"

2.2. Adding and Editing Slides

Now we need to add mOover slides, click on "Add" thumbnail:

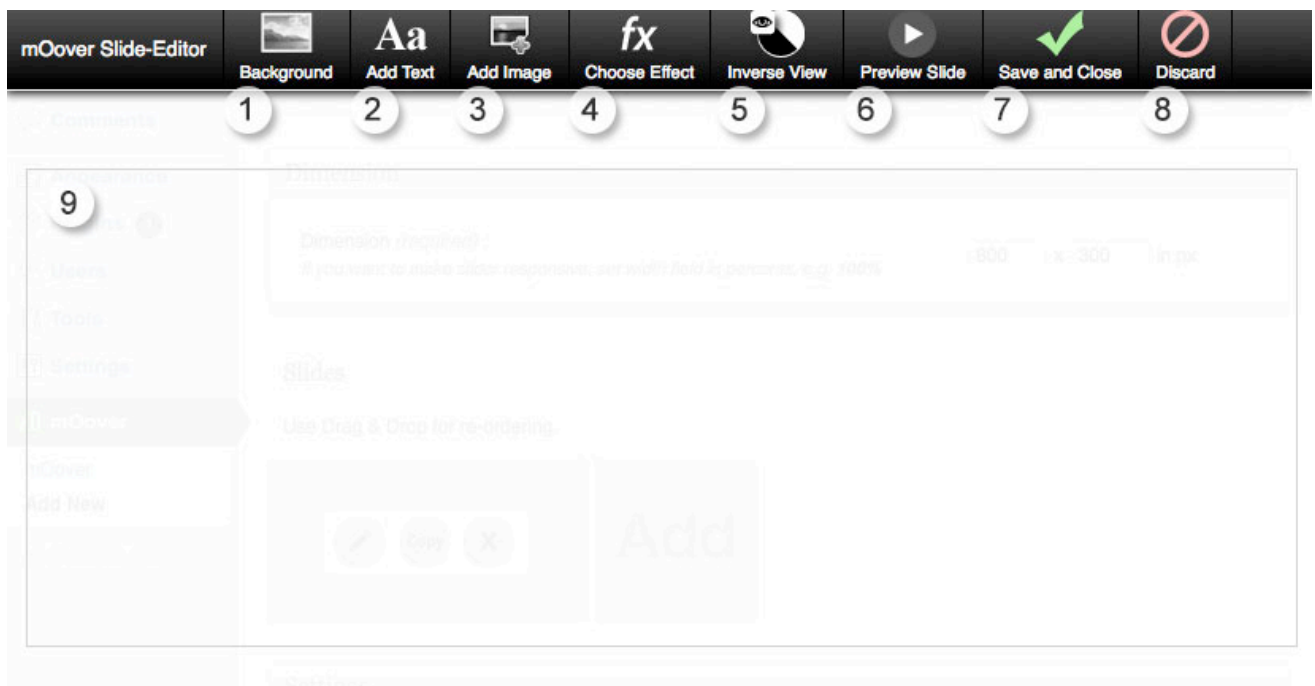

After that new slide thumbnail will appear:

- 1) "Edit slide" - click this icon to open slide editor, where you can choose slide's background and add there texts and image objects
- 2) "Copy slide" - click this icon to duplicate slide
- 3) "Edit HTML" - click to edit slide's HTML. This could be useful if you want to add extra styles to slide elements or to re-order them
- 4) "Remove slide" - click to remove slide

2.3. Slide Editor

Click on 'Edit Slide' icon to open full screen slide-editor:

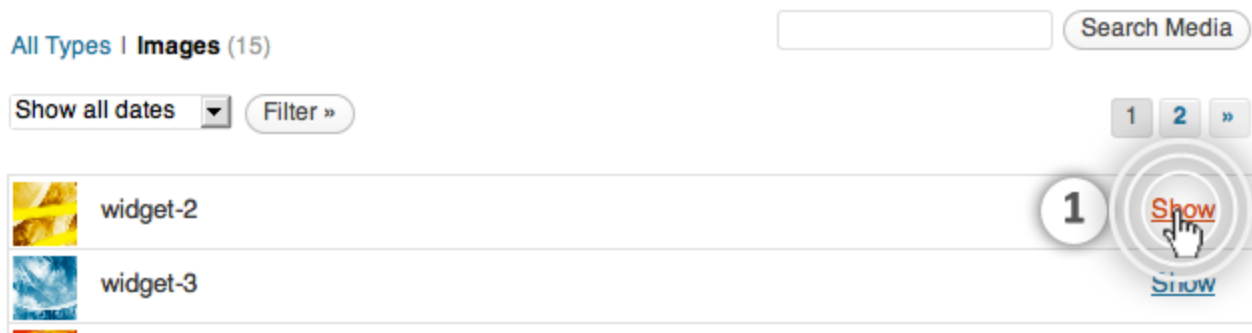

- 1) Click to choose/upload slide's background image
- 2) Click to add text
- 3) Click to add image object
- 4) Choose slide's effect

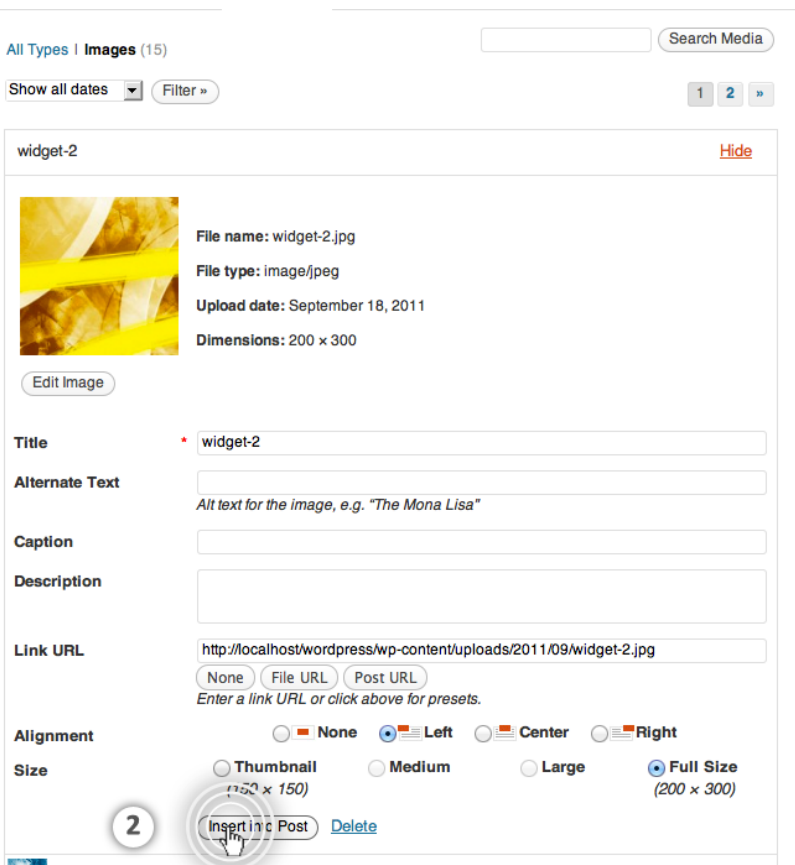

- 5) Reverse Slide Editor's background color - from white to black, or from black to white
- 6) Preview slide's animation
- 7) Save slide
- 8) Discard changes

2.3.1. Background Image

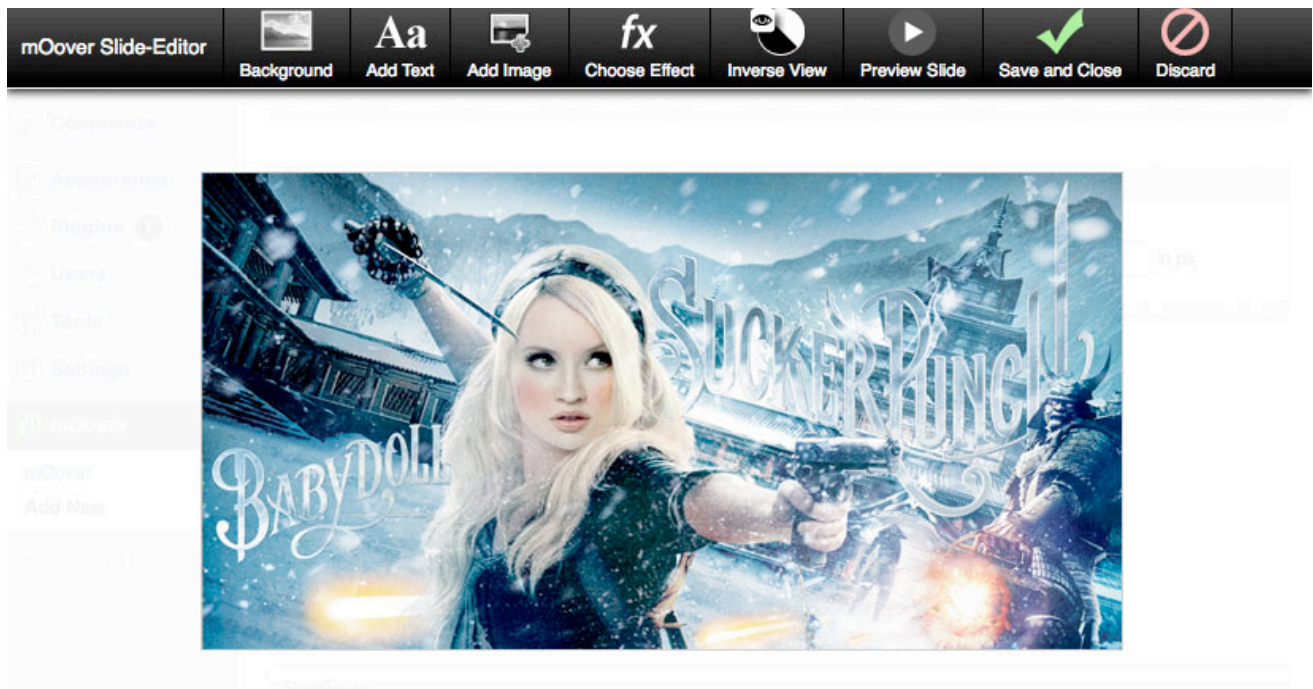

To upload slide's background click on "Background" icon above to open Media Library window. To choose the image from the Library first of all you need to click on the "Show" link near with desired picture:

Then you need to click on the "Insert to post" button

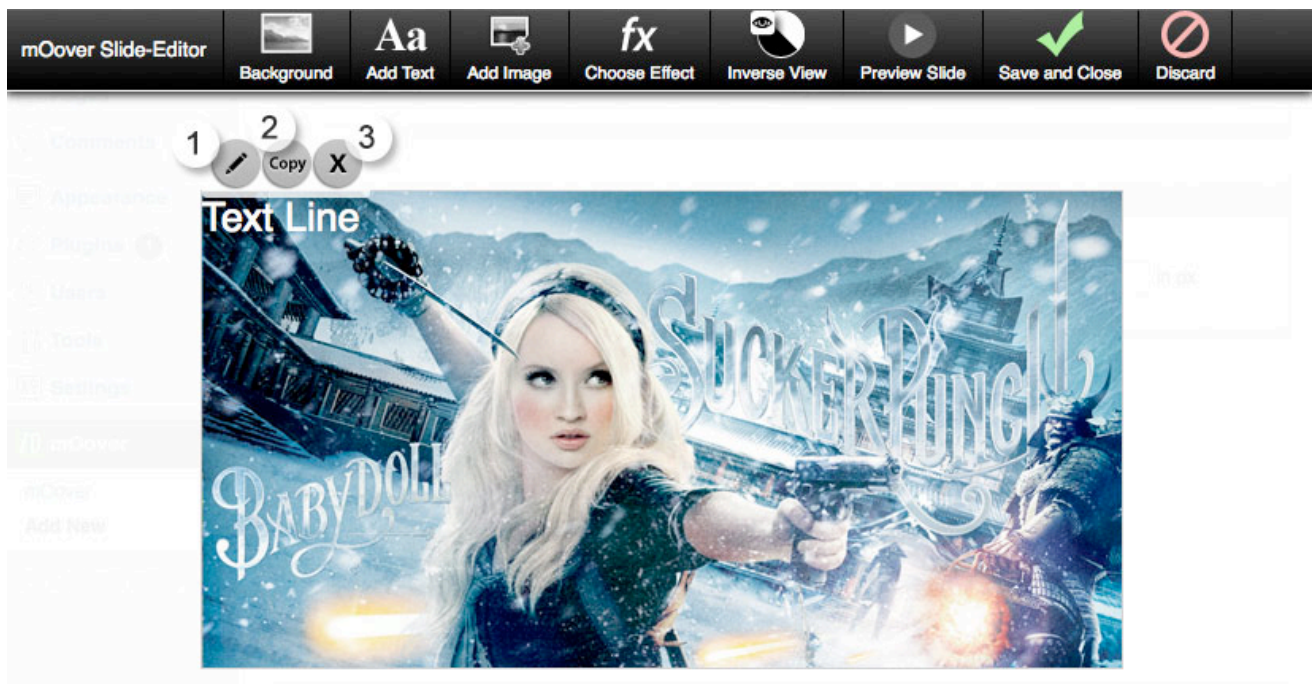

After that you will see slide with chosen background image:

2.3.2. Text Blocks

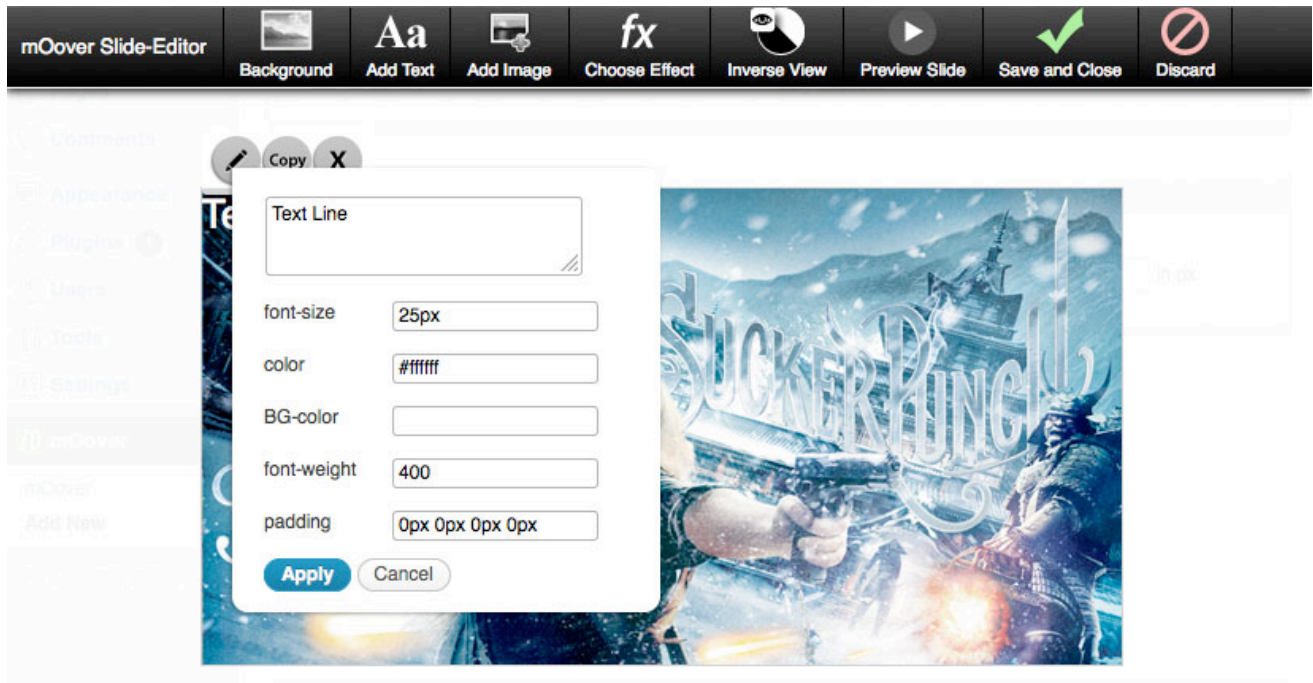

Click on "Add Text" icon. Text line with default text and styles will be added to slide:

Move mouse cursor over the new text line to see its context menu, there are three buttons:

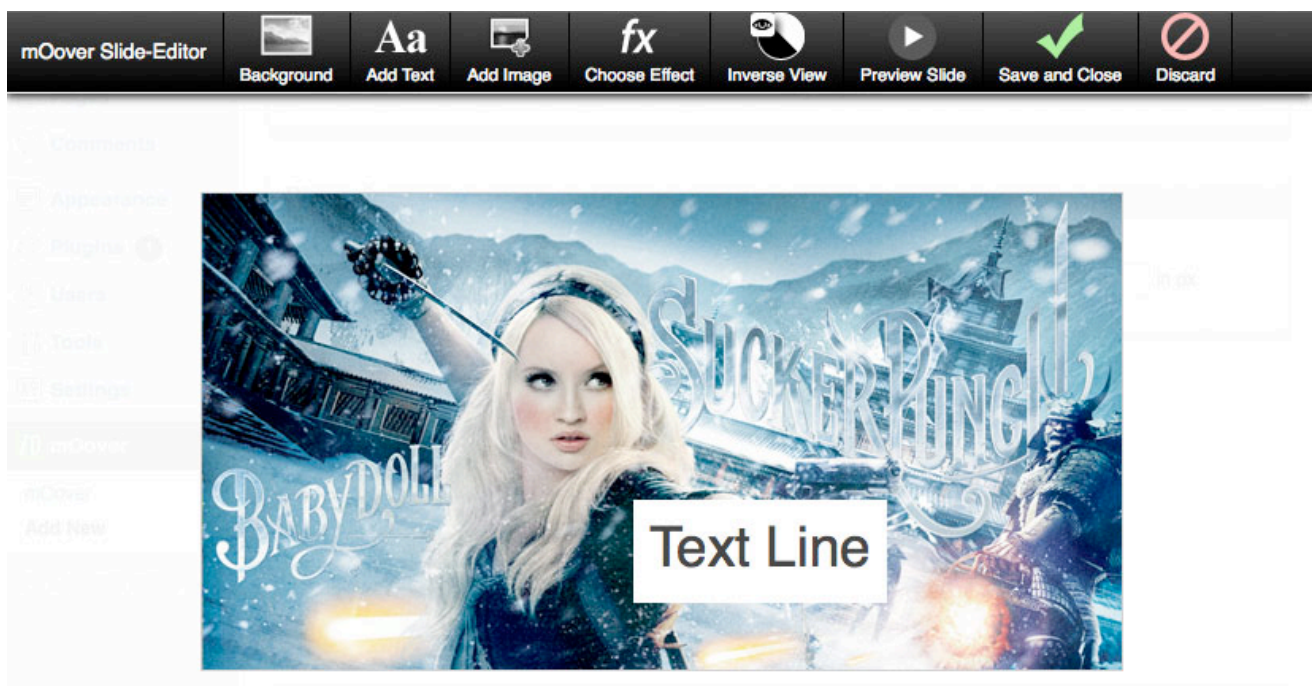

- 1) 'Text Editor' - click to open editor where you can change text and its style
- 2) 'Cope Text' - click to copy text block
- 3) 'Remove Text' - click to remove it

Here is how the Text Editor looks like:

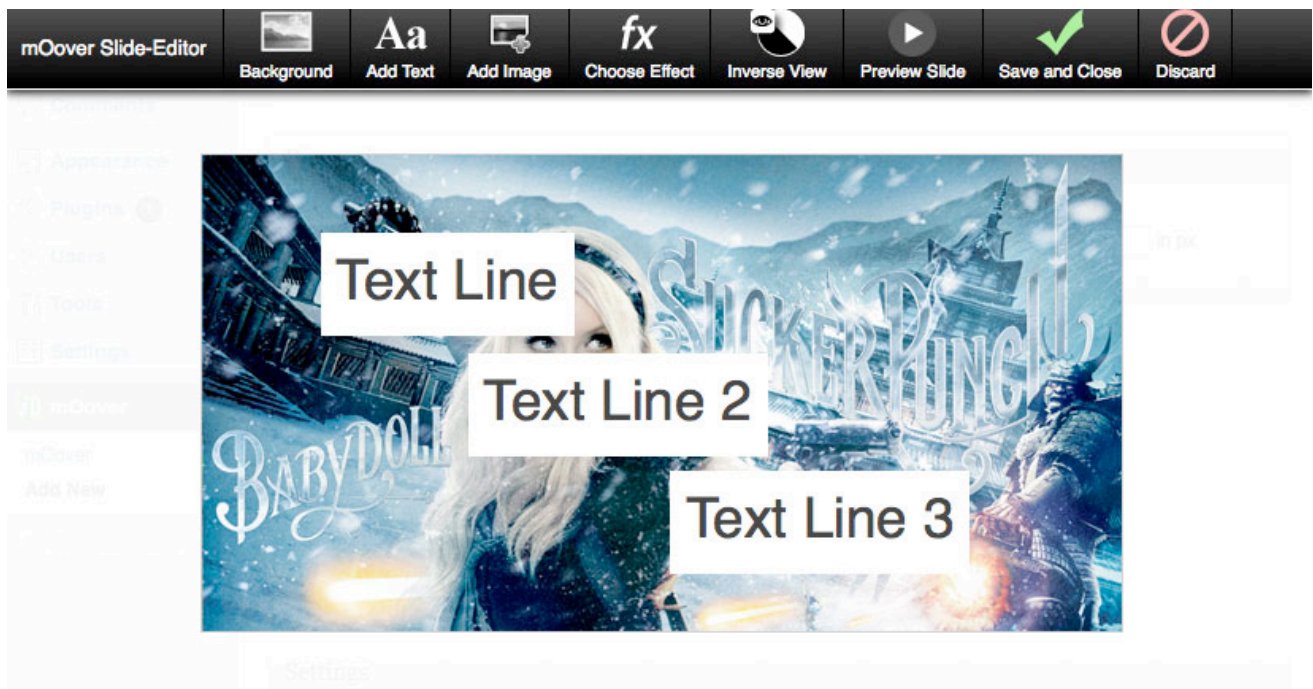

As you can see, you can change here text itself (or HTML), font size, color, background color, font weight (normal or bold) and padding. Click 'Apply' to apply styles to the selected text block

To change text block position just click it and drag to the place you need:

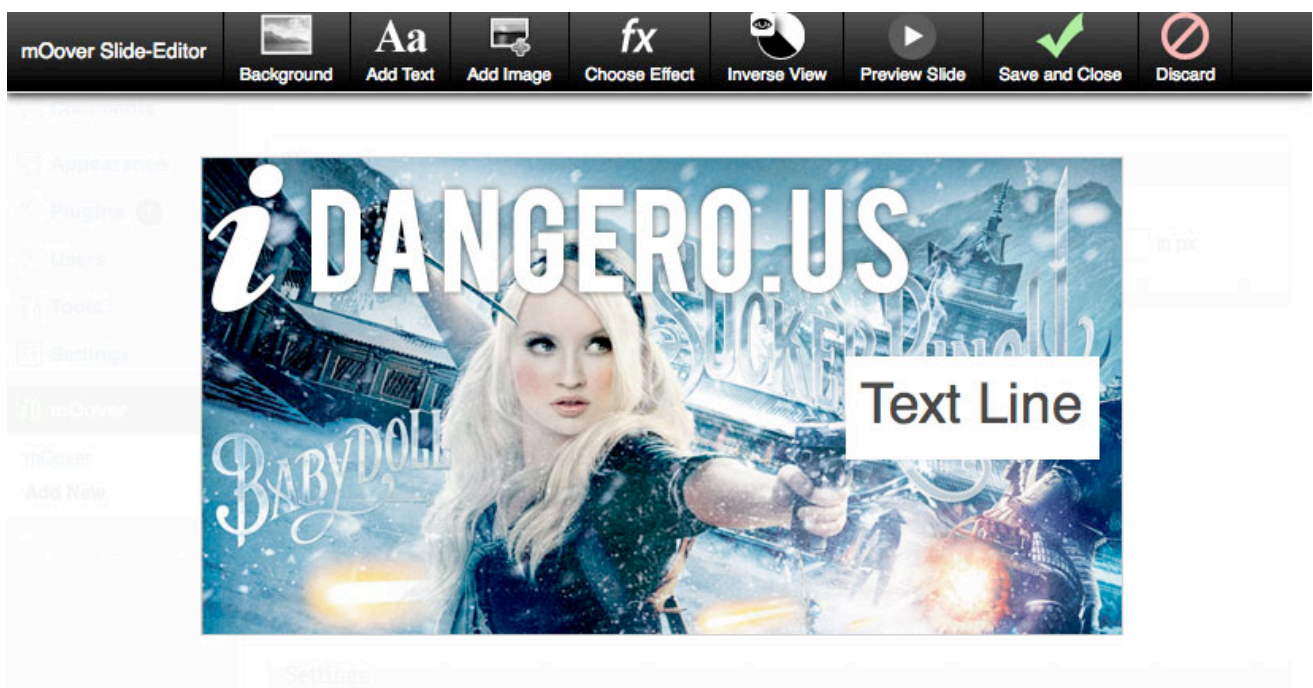

After you change text's styles you may want to add another text block, but if you don't want to change styles for every new text block, use 'Copy' button, in this case you will only need to change its text:

2.3.3. Image Blocks

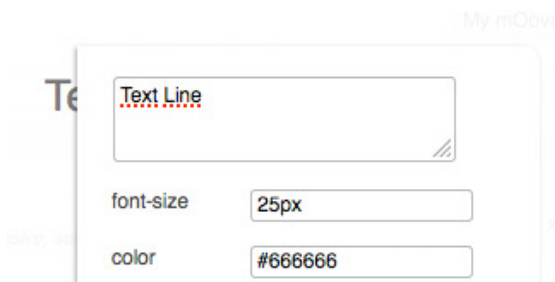

To add some image to slide, click "Add Image" icon in the menu. Process of adding image block is similar to adding background image. After you add it, image block will appear on the slide:

You can also move it over the slide by dragging with mouse

2.3.4. Add Hyperlinks and Custom HTML To Slide

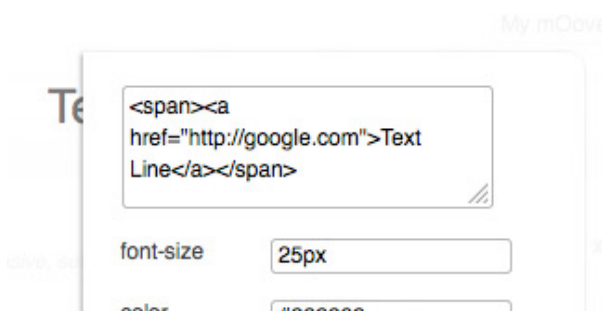

Actually you can not only Text or Image blocks to the slide, you can add any HTML there. Just add image or text block to slide and click "edit" button near with this element:

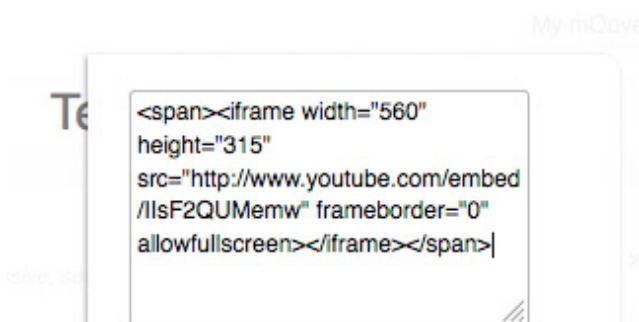

You will see text area with simple text. But actually it is a HTML of the slide's <P> tag. So you can easily add link here:

But if you are using Typewriter effect, you need to wrap it with SPAN tag or it will be ignored by effect:

You can insert any HTML, even embed video:

2.3.5. Effects

mOover support 4 types of effects:

- **"Slide"** - In this effect text blocks, image blocks and background image slide over the slide area line-by-line
- **"Typewriter"** - Typewriter is the most powerful and eye-catching effect of mOover. It is intended to "print" text chars, but also allows to print any other HTML elements like images.
- **"Pusher"** - In this effect text lines fall down, and every previous line pushes the line after it
- **"Fader"** - In this effect text lines fade in one after another

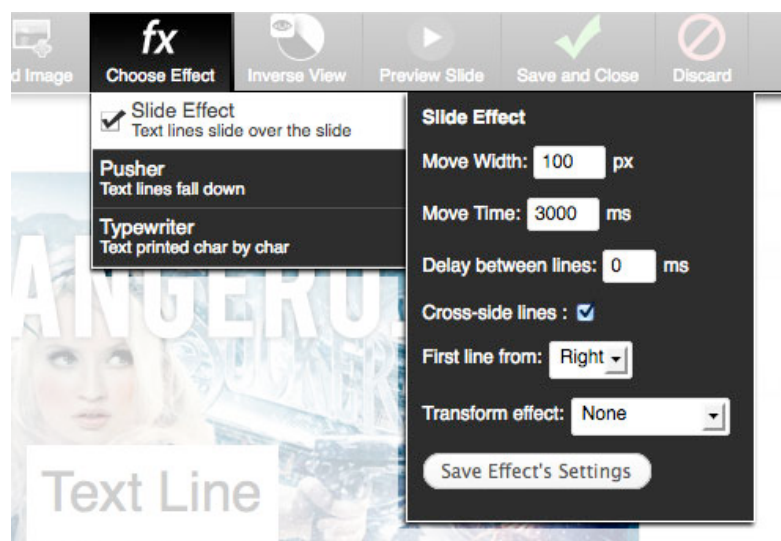

Hover the "Choose Effect" icon in the menu to open effect-editor:

First-level submenu intended to chose effect type. Click on "Pusher" to switch effect to "Pusher", etc.

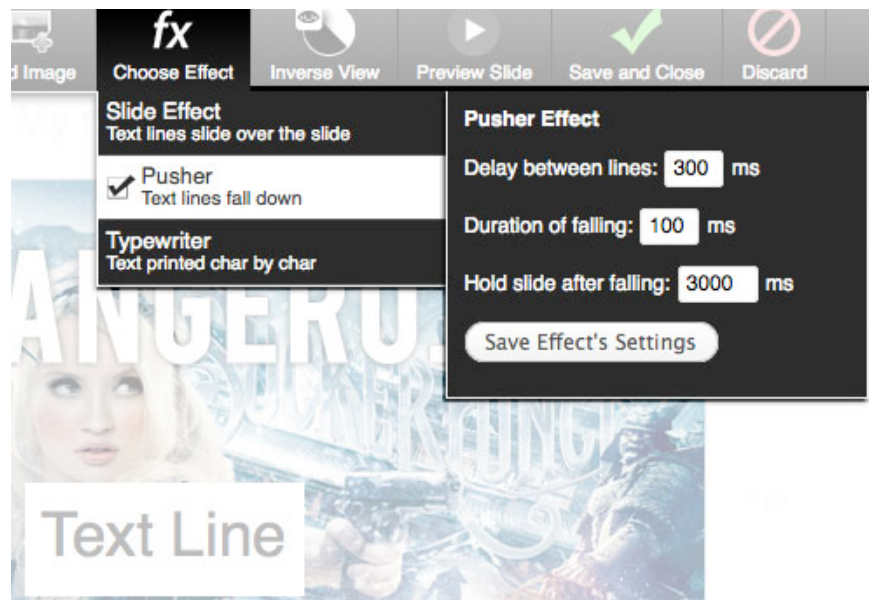

Now let's look at effects more closely:

"Slide" Effect

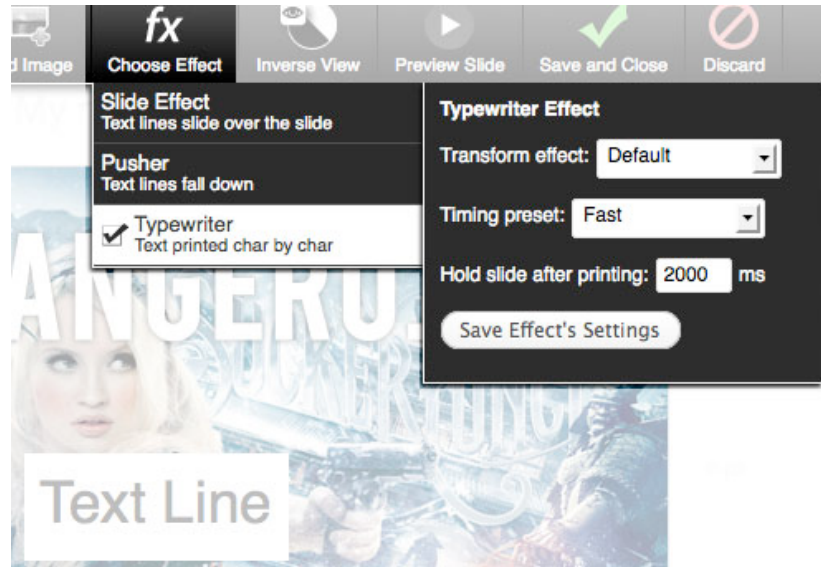

- **Move Width.** Text blocks (and image blocks) will be moved on a distance equal to this **value** (in px) during the animation. Slide's background image will be moved on a distance equal to this **value/2** (in px) during the animation
- **Move Time.** Text blocks will be moving for the time equal to this value
- **Delay between lines.** Delay in ms between blocks
- **Cross-side lines.** if checked then every next block will slide from different side
- **First line from.** If "right" then first block will slide-in from the right side
- **Transform effect.** CSS3 effect of slide-in/out animation

"Pusher" Effect

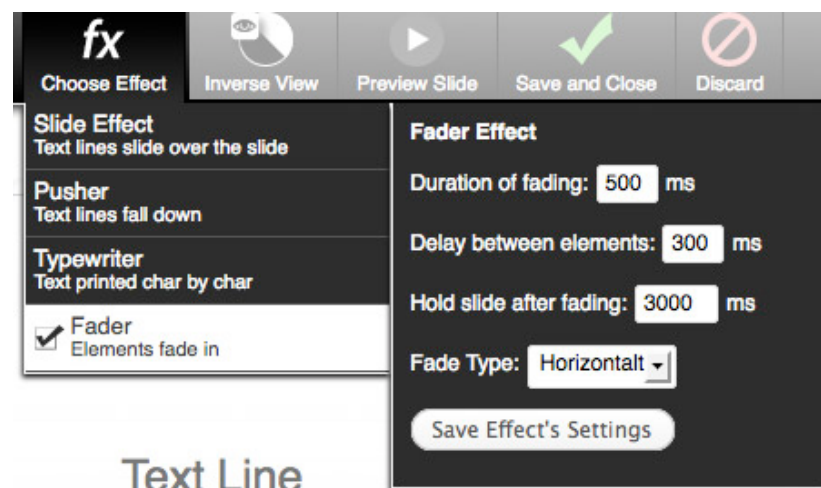

- **Delay between lines.** Delay in ms between falling lines
- **Duration of falling.** Duration of falling blocks in ms
- **Hold slide after falling.** After all lines fall down , mOover will hold them this time (in ms) until the transition to next slide

"Typewriter" Effect

- **Transform effect.** CSS3 effect of "printing" animation
- **Timinig preset.** It is combination of duration and delay timings. Use "fast" presets when printing text and "slow" for printing objects.
- **Hold slide after printing.** After all blocks will be printed , mOover will hold them this time (in ms) until the transition to next slide

"Fader" Effect

- **Duration of fading.** Duration fading animation in ms
- **Delay between elements.** Delay between elements in ms
- **Hold slide after fading.** After all blocks will be faded in , mOover will hold them this time (in ms) until the transition to next slide

- **Fade Type.** Type of fade in animation.

2.3.6. Preview Slide

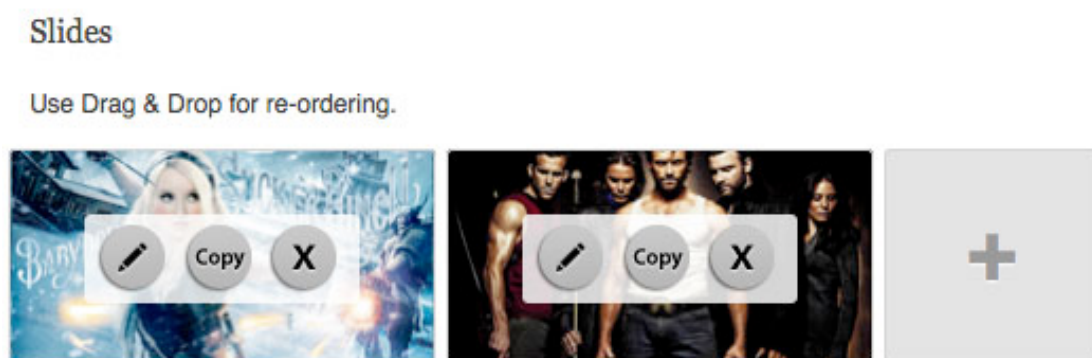

Click on 'Preview Slide' if you want to see how the created slide will look in animation. To stop preview you need to click on "Stop Preview"

2.3.7. Save Slide

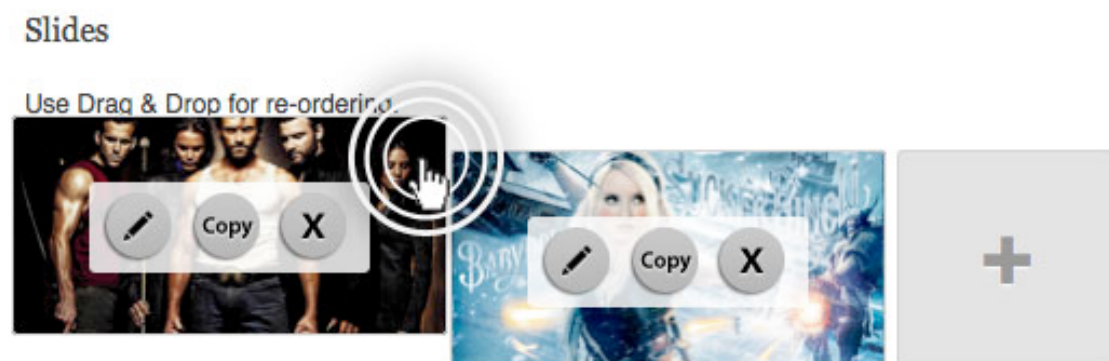

When you finish the current slide, click on "Save and Close" icon in the menu. Slide editor will be close.

2.4. Re-ordering Slides

When you have few slides, you may want to change their ordering:

To change ordering just click the slide and drag it to the required place:

2.5. Settings

Settings

Move Background Image :

If 'move', than background image will be moving during the selected text effect

Do not move ▾

Move Time :

Duration of background image movement. This value is also used by "Slide" text effect

3000
ms

Move Width :

Background image will be moved during the text effect on this value/2. This value is also used by "Slide" text effect

100
px

Slide In/Out Time :

Duration of slide-in/out animation between slides

600
ms

Scale Background Image :

Scale multiplier for the background image. It will be scaled to selected value during the text effect

Do not scale ▾

Images Preloader :

If "Enabled", then slideshow will start only after all images will be loaded. Loading process will be indicated with preloader image

Enabled ▾

Settings tab contains common settings for mOover. These fields are self-explaining. Only one important point. If you use "slide" effect than "Move Time" and "Move Width" here will be rewritten with the same parameters of "slide" effect, but only for slides with "slide" effect.

2.6. Pagination / Custom Controllers

Pagination / Custom Controllers

Close

Pagination :

Disabled

Active Pagination :

Set to "Enabled" if you want to make pagination buttons 'clickable'. In this case clicking on some pagination button will cause transition to appropriate slide

Disabled

Custom "Stop" button :

CSS selector of the element which will stop mOover.
For example: **a.stop-moover**

Custom "Play" button :

CSS selector of the element which will launch mOover if it was stopped.
For example: **a.play-moover**

Custom "Next" button :

CSS selector of the element which will cause transition to the next slide.
For example: **a.next-slide**

Custom "Previous" button :

CSS selector of the element which will cause transition to the previous slide..
For example: **a.prev-slide**

And again easy to understand self-explaining options. Here you can enable/disable pagination and specify custom controllers like Play/Stop/Next/Previous buttons.

For example if you want to create stop button, you can add somewhere such kind of element:

```
<a class="stopMoover">Stop mOover</a>
```

In this case you need to add CSS selector of this element in "Custom Stop button" field:

a.stopMoover

If you want to change styles for mOover default pagination, use these rules in your theme's CSS file:

```
body .moover-pagination {
    /* Rules for container with pagination buttons/switches */
}
body .moover-switch {
    /* Rules for pagination switch */
}
body .moover-switch-active {
    /* Rules for active switch */
}
```

}

2.7. Additional Parameters

Here you can add your custom JS callback functions and to disable/enable CSS3 effects:

Additional Parameters (Fro Pro Users Only) [Close](#)

CSS3 Effects:
By default mOover uses CSS3 transforms where possible (where possible). You can set to 'Disabled' to disable CSS3 transforms

Enabled ▾

onStart Callback Function :
Name of Javascript function that will be executed on mOover's initialization
For example : myOnStartFunction

onSlideSwitch Callback Function :
Function will be executed in the beginning of transition to next slide
For example : myOnSlideSwitchFunction

onSlideSwitchEnd Callback Function :
Function will be executed right after transition to next slide
For example : myOnSlideSwitchFunction

After you finish with all those settings you need to click on the "**Save mOover**" button to save the created mOover.

3. Integration

Integration of the mOover is very simple and available in three ways:

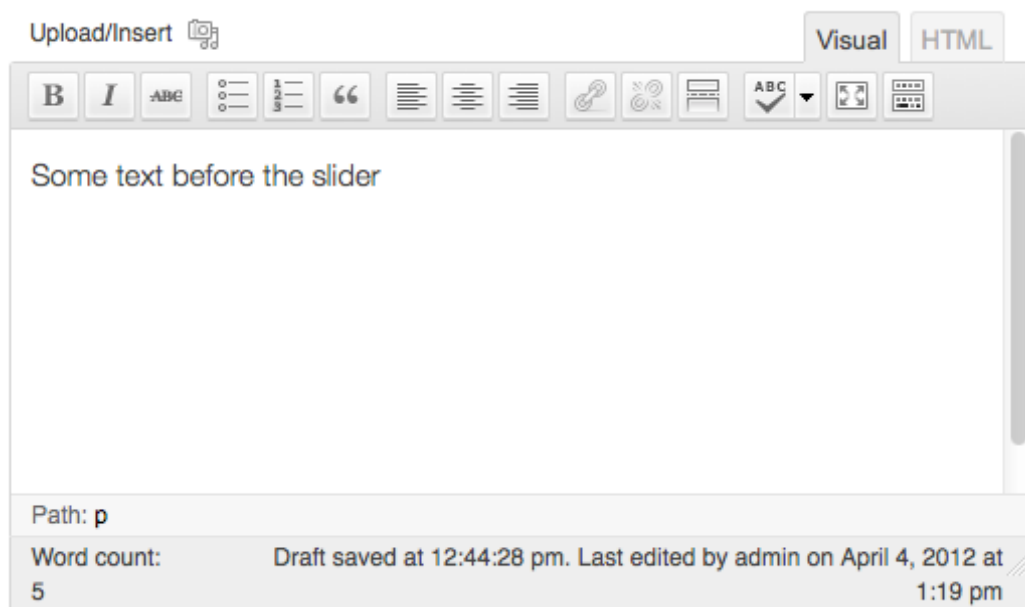

3.1 Integration with Shortcodes

In the table with created mOovers we can see required shortcode for every mOover:

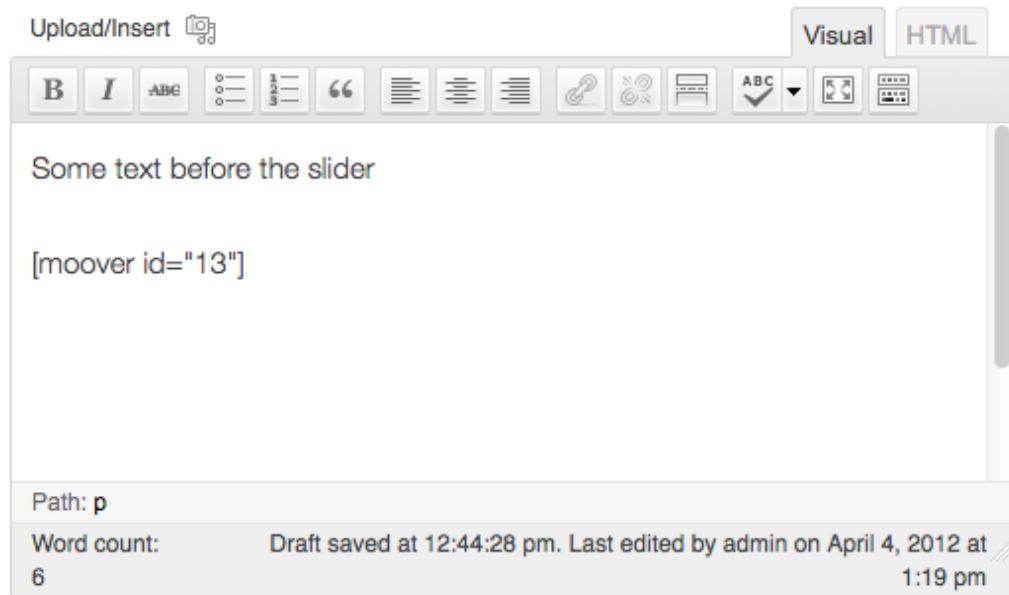

Add New mOover					
<input type="checkbox"/>	Title	Shortcode	Template Tag	Version	Created
<input type="checkbox"/>	My mOover	[moover id="13"]	<?php moover(13) ?>	2	2012-04-0
<input type="checkbox"/>	Bulk Actions		Apply		
Add New mOover					

For example in this case is the **[moover id="13"]**. Remember it or copy to the clipboard.

Now, go to the "Edit Post" page of the post where you want to insert this moover. On this page you will see text editor:

Now past here mOover shortcode :

That is all, click on the Update button to save the Post with Slider!

As you can see it is pretty simple.

If you want to integrate created Slider to into the page, you need to do the same but on "Edit Page" page.

3.2 Integration with Template Tag

Template Tag - is the simple PHP function that you can insert right into the Theme's PHP files to call the required Slider.

For example you need to integrate created Slider instead of default "Twenty Eleven" Theme's showcase on the top of the page. You need the wp-content/themes/twentyeleven/header.php file.

Find the following code and remove it:

```
<hgroup>
    <h1 id="site-title"><span><a href="<?php echo esc_url( home_url( '/' ) ); ?
>" title="<?php echo esc_attr( get_bloginfo( 'name', 'display' ) ); ?>"
rel="home"><?php bloginfo( 'name' ); ?></a></span></h1>
    <h2 id="site-description"><?php bloginfo( 'description' ); ?></h2>
</hgroup>
The following code need to be removed:
<?php
    // Check to see if the header image has been removed
    $header_image = get_header_image();
    if ( ! empty( $header_image ) ) :
?>
<a href="<?php echo esc_url( home_url( '/' ) ); ?>">
```

```

<?php
    // The header image
    // Check if this is a post or page, if it has a thumbnail, and if it's
a big one
    if ( is_singular() &&
        has_post_thumbnail( $post->ID ) &&

        ( /* $src, $width, $height */ $image =
wp_get_attachment_image_src( get_post_thumbnail_id( $post->ID ),
array( HEADER_IMAGE_WIDTH, HEADER_IMAGE_WIDTH ) ) ) &&
        $image[1] >= HEADER_IMAGE_WIDTH ) :
        // Houston, we have a new header image!
        echo get_the_post_thumbnail( $post->ID, 'post-thumbnail' );
    else : ?>
        " height="<?php echo HEADER_IMAGE_HEIGHT; ?>" alt="" />
        <?php endif; // end check for featured image or standard header ?>
</a>
<?php endif; // end check for removed header image ?>
End of code we need to remove
....

```

For example Template Tag for the required Slider is <?php moover(13) ?>. We need to insert it instead of remove code:

```

<hgroup>
    <h1 id="site-title"><span><a href="<?php echo esc_url( home_url( '/' ) ); ?
>" title="<?php echo esc_attr( get_bloginfo( 'name', 'display' ) ); ?>"
rel="home"><?php bloginfo( 'name' ); ?></a></span></h1>
    <h2 id="site-description"><?php bloginfo( 'description' ); ?></h2>
</hgroup>
<?php moover(13) ?>
....

```

That is all! Now the default theme header will be powered with amazing mOover.

But for the best integration we need to use a little bit extended code. Before we insert Slider's Template Tag we need to check is the **moover()** function exists. If we will not check this and, for example, you will remove (or deactivate) the mOover plugin, Theme's could be broken with PHP errors. So the full code will be:

```

<hgroup>
    <h1 id="site-title"><span><a href="<?php echo esc_url( home_url( '/' ) ); ?
>" title="<?php echo esc_attr( get_bloginfo( 'name', 'display' ) ); ?>"
rel="home"><?php bloginfo( 'name' ); ?></a></span></h1>
    <h2 id="site-description"><?php bloginfo( 'description' ); ?></h2>
</hgroup>
<?php
if( function_exists( "moover" ) )
    moover(13);
?>

```

4. Uninstallation

To uninstall the mOover WP Plugin, you need to go to the Plugins page, then deactivate mOover plugin, click on the uninstall link and follow the onscreen instructions.

mOover uses clean uninstallation. After you remove it and if "**Remove mOover database on plugin delete**" will be set to "Remove", plugin will remove all created data tables from the data base, it is mean that all created Sliders will be removed!

5. Important Notes

Couple of important notes you need to follow for the proper work of the mOover WP Plugin:

- 1) You can use as many Sliders on one page as you may need. But if you'll try to insert the same Slider few times on one page, only the last inserted Slider will work properly!
- 2) Add text and image blocks to the slide area in the order you want they appear. First added block will appear first, etc.

6. Troubleshooting

1. After you install and activate the plugin, mOover menu doesn't appear.

- Just refresh the page

2. You added embed video into the slide and it won't show in animation.

- You have to disable CSS3 in slider options

7. Video Tutorials

- Tutorial video on how to create simple attractive slideshow with mOover Wordpress plugin and integrate it to the post with shortcode just for 3 minutes: <http://youtu.be/3xhmZFnoovE>
- Tutorial video on how to create amazing slideshow with different effects for each slide, usage of text and image objects, and how to integrate it with template tag just for 7 minutes: <http://youtu.be/jnyScYsxVWw>
